NOAA has an imagery website that allows you to view aerials taken (so far) along the Texas Coast between August 27th and August 31st. The aerials extend from the border to Port Bolivar. As of this morning, there are not any aerials north of Galveston Bay, however many are added each day. The layer icon on the top right side of the page allows you to turn on/off the aerials by date.

August 27th – 29th includes aerials from the border to Port Aransas to the southern shorelines of Corpus Christi.

August 30th -31st includes shorelines and inner areas from the northern Corpus Christi shorelines to Houston.
